

BlueWalker GmbH expands the compatibility of PowerWalker UPS systems with leading NAS manufacturers (QNAP, Synology, Thecus)

EN

Back in November last year, [PowerWalker](#) UPS systems became compatible with Synology NAS. In close cooperation with Synology Inc. in Taipei and their German office, Synology GmbH in Duesseldorf, a direct connectivity has been established that makes PowerWalker UPS plug and play compatible to all Synology NAS systems with firmware higher than 4.1. For the full compatibility list of Synology NAS, please consult Synology's official website under <https://www.synology.com/en-global/compatibility> .

All mentioned product and company names are proprietary names or trademarks of the respective manufacturers

Building on these developments, the compatibility of PowerWalker UPSs has been increased even further to work together with models from QNAP (firmware 3.8.2 or higher) and Thecus (all 64 bit systems). Under UPS support in the energy tab of the system control panel a choice of all PowerWalker UPS is available. Simply enable the UPS support, choose the connected UPS model and your NAS system is already protected against crashes caused by power outages. If the power failure takes a little longer the UPS activates the shutdown of the NAS to protect the internal hard disks and your data.
